EXPERIENCE

Progressio SPA

Company

📅 May 2019 - Today   📍 Santiago, CHILE

- In May 2019, with a group of good friends, and with a common goal, we started a start-up, with the idea of gaining experience in a competitive labor market. Currently, I have the position of COO, focused on backend development. The start-up it's called Progressio

AngelHack-BCI

Hackathon

📅 July 2018   📍 Santiago, CHILE

- I was part of the winner team on the AngelHack-BCI hackathon. We presented a project that satisfied the actual problems on the social media area of the BCI bank. This platform allows the bank to be more efficient on the process between bank executives and the small companies.
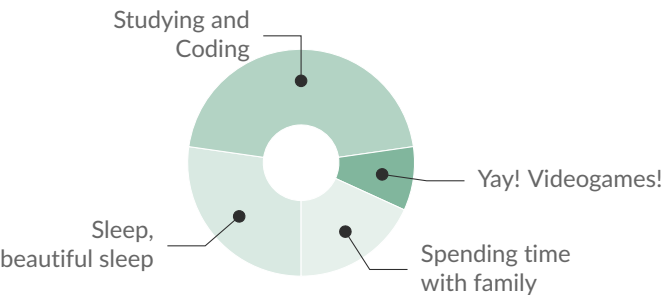

Programming Competitions

ACM-ICPC

📅 2017 - 2019   📍 Santiago, Valdivia & Concepción, CHILE

- In 2017 I participated in my first programming competition, called "Torneo Chileno de Programación" (Chilean Programming Contest). My team and I, without preparation, obtained a good place in the competitions. My university called us to represent them into the International Collegiate Programming Contest (ICPC) in November. There we obtained the nineteenth place.
- In 2018 we participated on Valdivia city, on our first travel outside Santiago as a team. We solved more problems in comparison with our previous tries, but again, we didn't win, although, we learned a lot.
- In 2019 we participated, this time with a different team, in Concepción city. Maybe we should be disappointed that we didn't win the competition. However, every year we feel better working as a team, we are more organized in doing so, and we are already starting to notice our different skills on different kinds of problems. We already know who is good at solving dynamic programming problems, algorithms, etc. I'm good at data structures. I'm happy with our work.

A DAY OF MY LIFE

Studying and Coding

Yay! Videogames!

Sleep, beautiful sleep

Spending time with family

MY LIFE PHILOSOPHY

"Don't waste your time, build the future today."

MOST PROUD OF

🏆 **Winning on a hackathon**
Winning on my second hackathon! Yay!

🏆 **Success on IBM tests**
On March, 2019, I sent my resume to IBM, trying to get a position on an internship there. Although I got a good score on logical-mathematical test, and in the psychological test, I didn't get a position only because my university doesn't demand an internship to get the degree. I'm proud because I succeeded the tests of a big company.

STRENGTHS

Hard-working   Eye for detail   Motivator & Leader   Strive
